

Environmental Policy

We are committed to providing valuable and high quality products and services that will meet the requirements and expectations of our customers. As part of this commitment, we are constantly working to improve our products, packaging and each of our activities. To ensure this, we implement our environmental quality policy. The following are the main points of the policy:

1. We ensure that our products, packaging and all our activities are safe for our employees, our needs and the environment.
2. We act to reduce or prevent the environmental impact of our products and packaging, from the design stage, through production, distribution, usage and disposal.
3. We take an important part in developing innovative and practical solutions of environmental issues related to our products, the packaging we use as well as in the production processes. As part of our work process, we support the sustainable use of resources, encourage reuse, recycling, composting and share our experience and expertise with other organizations that can contribute to achieving environmental goals.
4. We meet all the requirements of environmental laws and regulations. We use environmentally beneficial practices even when there are no specific government standards, and collaborate with international governments, analyze environmental issues, and develop cost-effective solutions and standards based on scientific developments.
5. We continually review our environmental technologies and programs and track our progress in achieving our environmental goals. In order to know the environmental impact of a product at each stage, we develop and use sophisticated and scientific testing of the product life cycle, from the phase of raw materials to its removal.
6. We provide our customers, our employees, the community, public interest groups and others with relevant and factual information regarding the environmental quality of our products, packaging and operations. We strive to establish and encourage open and truthful relationships and respond immediately to issues that concern these factions.
7. We ensure that all our employees understand the importance of accountability of integrating environmental considerations into their daily activities, and they responsibly and willingly do so. We encourage and recognize individual and group leadership to improve the environment. We also encourage employees to demonstrate their commitment to the environment during after work hours.
8. We have procedures, programs and resources to implement our environmental protection policies. We recognize that environmental progress is an endless journey of effort and improvement. However, we believe that by focusing on improving consumers' lives through more innovative and efficient technologies, we can continue to expand our business while preserving the quality of health and the environment.
